**Asbestos Class I & Class II Abatement Monitoring Report  
Floor Tiles, Floor Mastic, Exterior Wall Panels & Pipe Insulation  
The Harbor Gateway Project  
Building 1  
Torrance, California**

## **Introduction**

Environmental Solutions was retained by Boeing Realty Corporation to monitor and report on the abatement of above mentioned asbestos containing materials from the subject building I. The abatement work was performed by Tri-State Restorations, Inc. retained by Boeing Realty Corporation. This report presents the results of our observations made during the course of this project to the extent that involved asbestos abatement.

Tri-State removed asbestos-containing corrugated exterior panels from three sides of the subject building (the South side of the building is to be removed during the abatement of ACM from building I), and removed floor tiles and associated mastic (class II abatement) from the offices and the warehouses, roof mastic from penetration areas and asbestos containing pipe insulation (class I abatement) from the subject building's ground level, between April 4 and June 5, 2000. This work was commenced pursuant to Southern California's AQMD 10 day notification and approval period. The abatement work was substantially completed in twelve 10 hour shifts between the hours of 6:00am to 3:30 pm. The work was performed in accordance with the general construction industry standards for class I and class II, asbestos abatement, Federal OSHA 29 CFR 1926.1101 and 8 CCR 1529 for friable and non-friable asbestos-containing materials.

## **Summary of Observations**

Environmental Solutions monitored the mobilization, clean-up, preparations, asbestos abatement, disposal, final visual, air monitoring and demobilization during this project on daily basis. The asbestos-containing floor tiles and associated mastic were abated from all designated areas (as identified by a previous asbestos survey) of the said building. The abatement of floor tiles was accomplished by isolating and containing each area of subject floor of the building from the rest of the building and using proper environmental and safety methods/controls as per class II abatement regulations for performance of such work. The associated mastic was abated by a vacuum assisted bead blasting machine for the most part. The mastic @ corners and edges as well as small areas of the floors were abated by chemical removal method. The removed asbestos containing floor tiles were then bagged in non-hazardous plastic bags (clear bags) for proper transport and disposal. The remainder of the beads used for blasting was bagged and transported out as friable asbestos containing materials. A representative (the on-site supervisor) of Tri-State Restorations, Inc. executed the non-hazardous manifest for final transport and disposal by BDC. The roof mastic materials used around the penetrations was properly abated and conveyed into the 40 yard bin and disposed of as non-hazardous. The asbestos pipe insulations were abated using modified glove-bag methods in accordance with 29 CFR 1926.1101 for Class I asbestos abatement. These materials were bagged in asbestos marked bags and disposed of as hazardous.

Asbestos Abatement Report  
Boeing Realty Corporation  
Building #1  
Harbor Gateway Project  
June 7, 2000  
Page 2

Tri-State's workers were protected by tyvek protective suits, goggles, gloves, boots, and respirators during the abatement procedures. In general, gas-powered lifting equipment had to be used to access and lower the exterior wall panels and pipe insulations and in doing so, the workers had to be and were protected against fall hazards as well. The concrete floor of the entire building on the ground level was consistently cleaned of all fallen debris during the project.

Ambient air samples were collected, outside of the work areas by Environmental Solutions using low flow air pumps and air clearances were collected by high-flow air pumps through 25 millimeter CE cassettes for NIOSH 7400 "A" counting rule analysis off-site. Personal samples were collected by Tri-State for OSHA compliance. Visual clearance was achieved in the work areas of each floor (basement & ground) at the conclusion of the abatement activities and prior to demobilization (see attached field reports). Air samples were collected as clearance prior to final tear-down of confined areas. The results of the air samples are presented in Exhibit II of this report.

### Conclusion

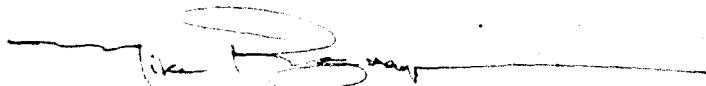

The analysis results of most of the air samples collected by Environmental Solutions during the abatement activities indicate levels that are below permissible exposure limit set by EPA and Cal-OSHA and the results of the air samples collected as air clearance in each of the confined areas at the completion of the work indicate fiber concentration levels that are below analytical sensitivity of PCM analyses. Therefore, *the abatement work areas of the subject building are released for demolition*. This report also serves as a "non-ACM status" letter for Boeing Realty Corporation.

Tri-State's workers medical and asbestos training submittals were reviewed and approved by Environmental Solutions prior to the start of work and will be presented in Tri-State's final report to Boeing Realty Corporation under separate cover.

The following sections are attached and complete this report:

- o      Exhibit I      Field Reports
- o      Exhibit II      Air Sampling Results
- o      Exhibit III      Laboratory PLM Results
- o      Exhibit IV      Hazardous Manifests

## FIELD REPORT

Job No.: ES00-005

Project Name BOEING REALTY CORP

Shift Start Date 4/4/2000

Project Location: BLDG 3 & BLDG 1

Contractor: TRI-STATE

Weather Condition: CLEAR & WARM

### DESCRIPTION:

- \* 10:00 AM / ENVIRO. SOLUTIONS ON-SITE. WE HAD BEEN INFORMED THAT TRI-STATE WOULD BE WORKING OR STARTING WORK ON BLDG 1 TODAY. BUT TRI-STATE IS NOT ON-SITE. WE DO HOWEVER MAKE AN OBSERVATION OF THE WORK TRIALS & THE STATUS IS AS FOLLOWS;
- \* THE TRAINING ROOM IN BLDG 3 WHICH IS THE LAST PIECE OF ACM ABATEMENT IN THIS BLDG IS NOW 100% PREPARED & READY TO START.
- \* THE ABATEMENT CONTAINMENT IN THE BASEMENT OF THE BLDG 1 IS LEFT INTACT, BUT NO WORK IS BEING PERFORMED IN THE THURSDAY.
- \* TWO TRAILERS (NO HAZ) <sup>ARE</sup> STILL PARKED BY THE ALLEY OF BLDG 3.
- \* MOST OF TRI-STATE'S EQUIPMENT & MATERIALS ARE STORED IN BLDG 3.
- \* NO BACKGROUND AIR SAMPLING PERFORMED.

Job No.: ES00-005

Project Name Boeing Realty Corp

Shift Start Date 4/6/2000

Project Location: BW43 1

Contractor: TRI-STATE

Weather Condition: Cloudy & cool

**DESCRIPTION:**

- \* 9:15 AM / ENVIRO. SOLUTIONS ON-SITE. TRI-STATE w/ NINE WORKERS IS IN THE PROCESS OF ABATING THE LAST OF THE TRIGA'S ACOUSTICAL MATERIALS IN BW43'S TRAINING ROOM. OUR OBSERVATIONS INDICATE THE FOLLOWING.
- \* THREE OF THE TRI-STATE WORKERS ARE WORKING IN THE TRAINING ROOM IN BW43. A FULL DECOD HAS BEEN SET-UP & ONE PERSON IS HEAVILY AIR MACHINE IS INCORPORATED.
  - \* THE REST OF THE EIGHT MAN CREW IS IN THE BPOSITORY OF BW41 DAILY REED BLASTING AND THE FLOOR REMOVALS FROM MASTIC. THE WORK IN THIS CONTAINMENT IS APPROX. 50% COMPLETE.
  - \* SOME EQUIPMENT IS STILL ON THE ROOF & REQUIRED REMOVAL. A TRUCK FROM TRI-STATE IS HERE TO DO SO.
  - \* ENVIRO. SOLUTIONS TAKES TWO AIR SAMPLES @ BW43 IN THE ( ) THE SMALL CONTAINMENT OF BW43.
  - \* TRI-STATE MEETS w/ JOHNNY MARASCO FROM ERIC TO DISCUSS DEMOLITION PROCESS OF BOTH BWS.
  - \* TRI-STATE IS WORKING A 10 HR SHIFT & ENVIRO. SOLUTIONS WILL MONITOR FIVE HOURS OF THE ACTIVITIES.
  - \* ONE OFFICE SPACE ABOVE IN BWS 1 HAS HAD ALL FLOOR TILES REMOVED & THE next will BE DOWN ON HARRY WOOD FRIDAY.

### FIELD REPORT

Job No.: ESOC-005

Project Name BOEING Facility Corp.

Shift Start Date 4/19/2000

Project Location: BUILDING 1

Contractor: TRI-STATE

Weather Condition: clear & mild

#### DESCRIPTION:

TODAY IS WEDNESDAY DUE TO RAINY WEATHER ON MONDAY & TUESDAY NO WORK COULD BE PERFORMED BY TRI-STATE ON THE ROOF.

TODAY TRI-STATE IS ON-SITE w/ A FOUR-MAN CREW. THE CREW IS WORKING ON A SPECIAL PART OF THE PROJECT.

THE WORKERS ARE TAKING THE EXISTING CORRUGATED PANELS OFF THE NORTH-EAST CORNER OF THE BUILDING. THIS IS A SIMULATION. WE ARE TRYING TO DETERMINE IF THE PANELS COULD BE COMPRESSED INTO A SMALLER VOLUME TO SAVE MONEY ON DISPOSAL.

ENVIR. SOLUTIONS STARTED UP TWO AIR SAMPLED USING LELFAL PUMPS. THE AIR SAMPLES ARE SET IN THE GENERAL WORK AREA.

THE CORRUGATED PANELS ARE INDIVIDUALLY DEMONTED BY ONE MAN & A SECOND MAN. THEN THE MEN SEPARATE THE LONG LENGTH OF METAL & PLACE ON SPECIAL RACK TO BE CRUSHED & COMPRESSED DOWN.

THE AREA IS HEAVILY VACUUMED & THE GROUND CLEANED.

THE WORKERS ARE PROTECTED BY TYVEK SUIT & K-FACE MASK.

### FIELD REPORT

Job No.: ESCO-005

Project Name Boeing Party Corp.

Shift Start Date 5/9/2000

Project Location: BUK 1

Contractor: TEI-STATE

Weather Condition: clear + mild.

#### DESCRIPTION:

① 7:00 am TEI-STATE was on site w/ five men.

The scheduled the work is divided into two distinct types.

Class I ACM ABATEMENT or 9 PIPE INSULATION REMOVAL & CLASS II REMOVAL OF CORRODED EXH. w/ Panels.

Enviro. Solutions observation @ 10:00 am indicated

→ TEI-STATE is compacting panel walls & putting the panels in boxes of prepared bins. E

→ Two man crew continues to work on top of a classifier to remove/strip ACM pipe insulation using Glue-Bag methods. Strong DRAFT is blowing across the bldg. out to no avail.

② 12:30 pm/ The scope of the same activity continues.

The crew has been working for the shift longer than normal. The workers are fatigued w/ typical w/ free respirators.

No evidence of break of slope was observed.

A hot tub was picked up & hit one deepest off wall.

Optical Microscopist

B.M. Kolb, Laboratory Director

The EPA method is a semi quantitative procedure. The detection limit is between 1/10 to 1 percent by area and is dependent upon the size of the asbestos fibers, the means of sampling and the matrix of the sampled material.

The test results reported are for the sample or samples delivered to us and may not represent the entire material from which the sample was taken. The EPA recommends three samples or more be taken of a "homogeneous sampling area" before friable material is considered non-asbestos-containing.

This report, from a NIST accredited laboratory through NVLAP, must not be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government.

\*\* Negative floor tile samples may contain significant amounts (>1%) of very thin asbestos fibers which cannot be detected by PLM. Confirmation by X-Ray diffraction or TEM is recommended by EPA (Federal Register Vol. 59, No. 146).

Note: This report shall not be reproduced, except in full, without the written approval of EMS Laboratories, Inc.

Assessment - Engineering - Management

## **NOTICE AND CERTIFICATION**

The waste identified on manifest number 99745281 and bearing California Waste Code 151 is subject to land disposal restrictions contained in CCR Title 22, Chapter 18, Article I. The waste meets the definition of a treated hazardous waste pursuant to Health and Safety Code, Section 25179.3 (1)(2), which states that waste is considered treated if the waste does not contain any substances above the Soluble Thresholds Limit Concentration values established in CCR Title 22, Chapter 18, Article II; and the waste is not prohibited from land disposal as provided in Health and Safety Code, Section 25179.6.

*(waste analysis is attached for these wastes, where available)*

As required by CCR Title 22, Chapter 18, Article I, the following certification is made for these wastes:

I warrant that I am an authorized representative of the generator. I certify under penalty of the law that the waste complies with the treatment standards specified in California Code of Regulations, Title 22, Division 4.5, Chapter 18, Section 66268.114. I believe that the information I submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of a fine and imprisonment.
